ASSA ABLOY

ASSA ABLOY, the global leader
in door opening solutions

Hilton Hotels have been installing Traka key management solutions for many years with huge success. With the amount of keys that are distributed to different users on a daily basis, full accountability of each and every key is crucial. When it comes to managing keys, securing premises is a critical element for not only protecting the Hotels assets but also ensuring guest and staff safety. By installing Traka's key cabinets, the risk of losing bunches of keys is minimized and keeping buildings, facilities and other restricted areas secure is drastically increased.

Currently 23 Hilton hotel locations around the UK are using Traka's key management solutions and feedback from the current users has been excellent:

HILTON PARK METROPOLE

"Before we installed Traka, we were reliant on 13 different sign out books to monitor our keys. We had queues of people waiting to sign out keys in different departments, costing us at least an hour a day in down time trying to locate the keysets. Traka not only reduced the down time costs, but also reduced the number of times we had to reset keys resulting in more efficient operations."

THE TRAFALGAR HOTEL

Kara Monteiro, Director of Operations, has been extremely impressed with Traka's key management solutions "Looking back, I don't know how we ever managed without. My initial thoughts were 'do we really need this' but it has been the best thing we ever did. I would recommend it to anyone."

By securing your keys, you are protecting the safety of your valuable assets.

HILTON PARK LANE

Hilton Park Lane do not currently have Traka key management solutions installed. However, after calculating the costs they current spend on having a staff member on site 24 hours a day, 7 days a week, issuing keys alone and that they are wasting 8,736 hours a year on administrative labour for this process, Traka systems could eliminate this tedious task. Not only could their staff expenses be better used elsewhere in the business, but it drastically reduces down time wasted in issuing keys manually.

SAFETY AND SECURITY MANAGER

Dewi Miles looks after numerous Hilton hotels across the UK, some have installed Traka, and some have not. His biggest issue is dealing with hotels without the Traka key cabinets as the key log books are out of date, no accurate audit trail has been kept to locate the keys and terrific amounts of time and money are wasting on trying to find the keysets or replacing them all together. "Traka is a fantastic product, it creates an automatic audit trail, so you can track who was last to use a specific key at any one time."

Traka key cabinets control who gains access to your keys – restricting them to authorised users only. Each key provides a full audit trail which increases accountability and creates a higher level of ownership amongst staff, resulting in fewer loses and damages. Traka solutions can be integrated with almost any existing control systems meaning that current staff ID cards can be used to gain access to the cabinets. Alternatively we can provide unique PIN codes, biometrics fingerprint registration or proximity tokens to provide secure access to each individual. Each set of keys are accompanied by an iFob which electronically records key usage and complies comprehensive management information for full auditability. A full suite of reports is generated through our software administration tool so that you can track who the last user of each key was, when it was removed and when it was replaced.

What's your return on Investment?

- Reduces down time wasted on locating keys
- Eliminates administration time and expense on key management
- Reduces costs of replacing keys, resetting security systems or changing the locks altogether
- Frees up staff hours for more effective tasks
- Ensures your assets and premises remain secure at all times
